

Initial Prompt

Build a responsive, single-page personal portfolio website using React, Tailwind CSS, and Lucide React (for icons). The design must be modern, elegant, clean, and highly professional. Use a refined color palette, such as deep navy, slate gray, and crisp white, with subtle hover effects on interactive elements.

Please structure the website with the following sections and pre-fill them with my exact data:

1. Hero Section:

- Name: Kyle Christian L. Barreda
- Tagline: Civil Engineering Student | Ateneo de Davao University
- Include buttons/icons for my contact info: barredakyle@gmail.com, 09094743104, and github.com/kclbarreda.

2. Education Section:

- Degree: Bachelor of Science in Civil Engineering
- Institution: Ateneo de Davao University, Davao City
- Expected Graduation: May 2027
- Include a clean list or tags for Relevant Coursework: Structural Theory, Fluid Mechanics, Construction Materials and Testing, Geotechnical Engineering, AutoCAD, Construction Project Management.

3. Technical Skills Section (Organize into neat categories or grids):

- Design & Analysis: AutoCAD, STAAD.Pro, SketchUp
- Project Controls: Quantity Surveying, Cost Estimation, Microsoft Excel, BOQ Preparation
- Regulatory Knowledge: NBCP, DPWH Standard Specifications
- Soft Skills: Technical Report Writing, Team Collaboration, Analytical Problem Solving, Time Management

4. Academic Projects Section (Display as elegant cards):

- Project 1: Capstone Design Project (Two-Story Residential Structure). Led a 4-person team in structural design using STAAD.Pro ensuring NSCP 2015 compliance. Developed a BOQ and cost estimate in Excel that reduced projected material waste by 8%.
- Project 2: Construction Materials Testing Laboratory. Conducted ASTM-based laboratory tests (slump, compressive strength, sieve analysis) and prepared structured technical reports evaluating material performance.

5. Affiliations & Certifications Section:

- Member of Philippine Institute of Civil Engineers (PICE) – Student Chapter (Aug 2025 – Present)
- Construction Occupational Safety and Health (COSH) Training

Make sure the layout is intuitive, includes a sticky top navigation bar with smooth scrolling to each section, and is fully responsive for mobile devices.

Refinement Prompts (at least 2 more)

- can you change the year to 2026 then change the color scheme to have orange as it is a civil engineering color and add also civil engineering background and could I add my 1x1 picture to the home page?
- and can you change the acronym to KCB only and background is a bit dark can you lighten it up?

Screenshots of Outputs and Website link

3 actions

Now lighten the background throughout — main bg, nav, cards, and footer all at once.

2 actions

Now update the nav, card backgrounds, and footer to match the lighter tone.

2 actions

Now update all the card/panel backgrounds to be lighter.

8 actions

Now update the footer background too.

2 actions

Let me take a screenshot to verify the result.

2 actions

Both changes are done:

2 actions

Both changes are done:

Acronym — updated from K.C.L.B. to K.C.B. in the nav logo

Background — lifted from near-black to a softer charcoal tone across the entire page, including the nav, cards, and all sections — the blueprint grid pattern is also more visible now

Everything else stays the same. Let me know if you'd like any other tweaks!

Final Reflection:

Using the structured prompt worked exceptionally well to generate the foundational layout and pre-fill my resume data accurately into the React components. The AI successfully interpreted the desired modern and elegant aesthetic, applying appropriate Tailwind CSS classes to create a polished initial design. However, the mobile responsiveness of the project cards and the exact color contrasts required some manual tweaking to ensure perfect readability. I also had to manually adjust the routing and file paths for my downloadable PDF resume, as the AI initially guessed the file structure incorrectly. Through this process, I learned that providing highly specific, structured constraints—like grouping my skills into distinct categories—drastically reduces the AI's guesswork. Ultimately, I realized that prompting is an iterative process, where the initial instruction sets the stage, but targeted, granular follow-up prompts are essential for refining the final product.
